

Unequal field division. Must use two contrasting tinctures.

The central area is blazoned first, then the corners, as “*tincture* chaussé ployé *tincture*.” Term is French, suggesting the lower corners are “shod.” Corners are typically not charged. Issues from chief corners of device and reaches the center base. Similar to a pile throughout, but stretches the full width of the chief and is treated as a field division rather than a charge.
